# Sections

The sections are implemented for ease of searching, displaying, working with courses, tests.

To add a section, you need to enter the name in the input window and click "Add +".

It is recommended to add not too many entities (20-30) to the section, so as not to unnecessarily slow down the work with catalogs.

Sections will be sorted alphabetically afterwards.

To change the section name, you need to click on the pencil next to it, then make changes in the input window and click on the pencil icon "Edit".

To delete a section, you need to click on the cross next to it.

Before deleting a section, it is recommended to first transfer the contents from it, otherwise it will be lost.

Element "Default settings" is designed to reset partition settings.
