# Catalog sections

Sections are implemented for convenient search, display, and work with courses, tests, programs.

To add a section, enter the name in the input window and click "Add +".

It is recommended to add not too many entities to a section (20-30) to avoid excessively slowing down work with catalogs.

Sections will subsequently be sorted alphabetically.

To change the section name, click the pencil icon next to it, then make changes in the input window and click the pencil icon "Edit".

To delete a section, click the cross icon next to it.

> Before deleting a section, it is recommended to first transfer content from it, otherwise it will be lost.

The element "Default settings" is intended for resetting section settings.
