

# Events

## Introduction

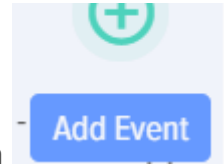

1. The "Events" module is designed for planning, organizing, and accounting for educational Events. For example, attending a conference, in-person training, meeting with a mentor, etc.
2. The main features of the module:
  - Creating events, sending invitations to participants..
  - Collecting applications for participation, confirming participation, controlling the number of participants.
  - Collecting feedback forms based on the results of the event.
3. In the application Settings (Settings - Other), you can hide the catalog. At the same time, it will still be available to the application moderators.

4. Events can be added to a Program. In this case, the Event will be located in Programs.

## Creating an event

1. There are two possible ways to create an event:
  - By a moderator.
  - By a user through an application. After the moderator confirms the application, the event will be created.

2.**By a moderator.** To create an event, click the "Add" button , he event creation card will open
