

# Disk

The Disk section is designed to manage disk space.

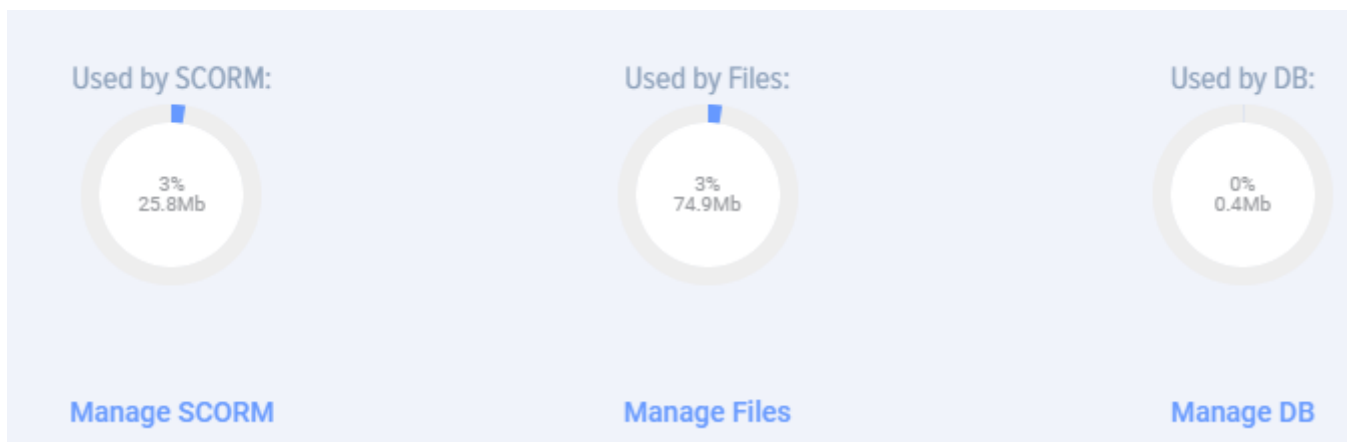

The data storage architecture in the application is arranged as follows:

SCORM packages, files (video, images, pdf), which are added to lessons, tests, courses - are stored on our servers. Data related to statuses, settings, reports, notifications, we call them operational data - are stored in the database on our server. Daily data backup is configured on the server, so all data is safe.

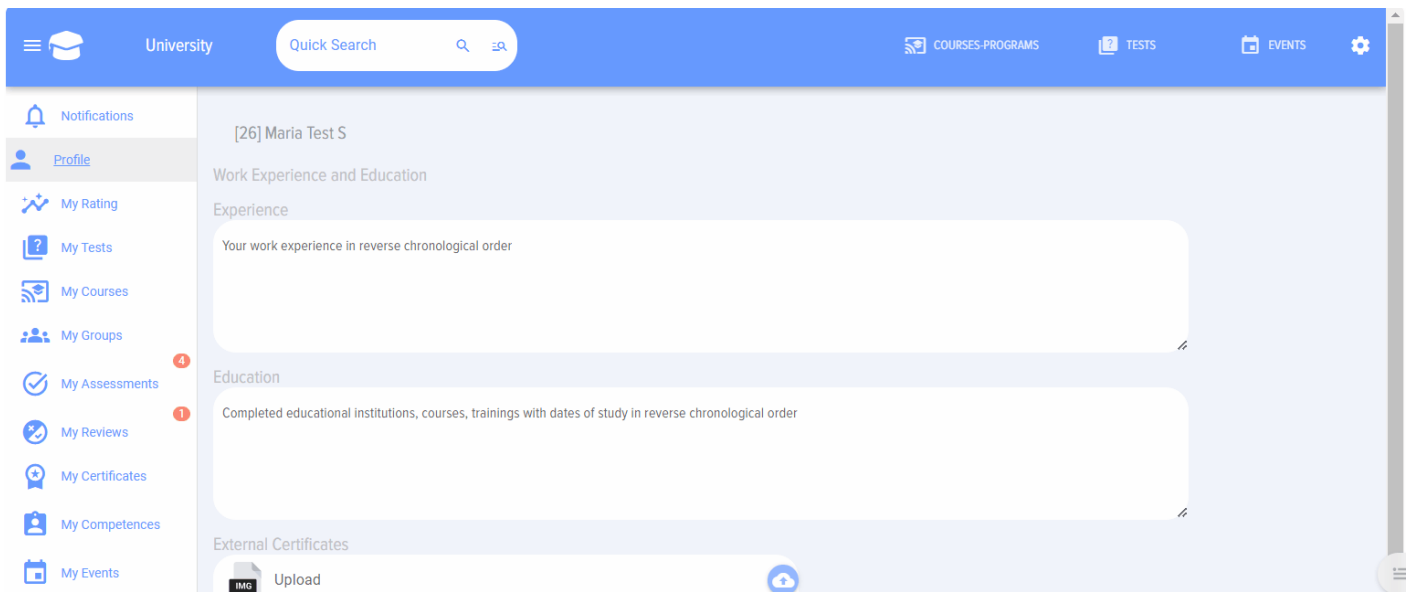

1 gigabyte in the cloud is provided for free. This is enough to create a large number of courses, tests, 360 assessments, IDP, etc. But if there is a need to upload a large number of SCORM packages, videos, PDF or JPG files to the server, then you need to expand the disk space or delete unnecessary files.

To delete unnecessary files:

Open the section Manage SCORM, files or DB.

Select unnecessary files and delete them. Deleted files will be moved to the trash. Files will be automatically deleted from the trash after 30 days. You can also restore deleted files from the trash.

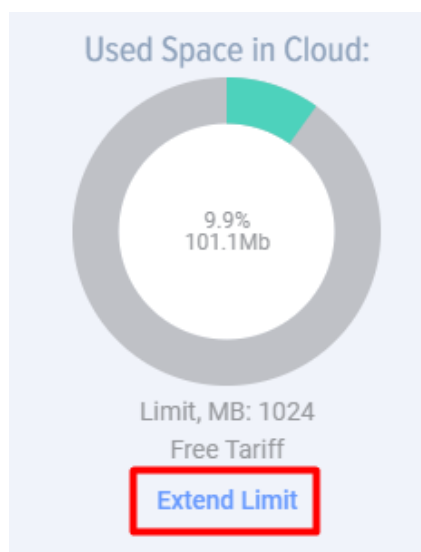

If the Disk space runs out, the application will issue a warning (when more than 90% is occupied).

Once the limit is exceeded, it will be blocked and the following message will be displayed.

To expand your disk space:

Click on Extend limit

Country  
United Kingdom

Select your country

Select a plan, fill out the application.

Then, depending on your country and payment method:

- For some countries, payment documents will be generated automatically.
- For other countries, we will send payment instructions by email.

After payment, we will activate the plan you selected.
